# Ai2html notes

It's a tool that will help you render clearer text on the web — right from illustrator.

1. Download and install here: http://ai2html.org/
2. Open example: scatter.ai
3. Notice that you have two artboards: a wide one and skinny one.

4. Run ai2html
5. This should produce 3 files: scatter-300.png, scatter-400.png and scatter.html
6. Run hot-server on the scatter.html file. You should see the chart there.
